

Flood and drought warning for staying ahead of your game.

Unexpected floods and droughts severely impact your business. GLOFFIS provides early warning so you can take pre-emptive action and prevent losses.

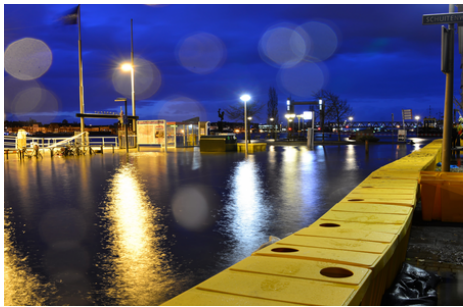

Prevent financial risks from floods

Floods can be financially risky for businesses, especially for those in flood-prone areas. Property damage, business interruption, and revenue loss can lead to high repair costs, relocation expenses, and increased insurance premiums. Floods can also damage business reputation and customer trust. Businesses can prepare for emergencies by ensuring they have available timely forecasts.

Protect against losses from droughts

Droughts can financially impact businesses that depend on water, such as agriculture, manufacturing, and energy. Crop failures, lower productivity, and higher costs due to increased irrigation or water transportation can cause revenue loss. Regulatory restrictions and potential social unrest can further compound the impact. Businesses can manage risks by looking into the future with drought forecasts.

GLOFFIS provides flood and drought forecasts to make better business decisions.

GLOFFIS can adapt easily to your business. Whether you want a forecast for flood or drought, for a single or for multiple locations or integration into your dashboard, GLOFFIS can easily adapt to your demands. Schedule a meeting and let us know how you would like to use GLOFFIS.

Trustworthy forecasts built on 100 years of experience

GLOFFIS is developed by Deltares, the Dutch national R&D institution for water management and geotechnical engineering. With GLOFFIS you benefit from 100 years experience in water management.
